

## 19.Straineradapter

	<p>Just take a metalplate and screw it to the shell by using the originalholes.You have to use 2 nuts for example to rise the plate a bit from the shell.Then you can screw the strainer on the plate. By using this methode you can mount every strainer on every shell without drilling new holes.When you find the original strainer ist easy to rebuild the snare.</p> <p>My example is a #787 strainer on a SONOR phonic shell.</p>
