

Links: Free Windcontroller (EWI-)Package (mostly) by *windplayer (Meister Wind)*

Variants for **Respiro** instruments:

<https://www.imoxplus.com/site/index.php/forum/respiro-sounds/320-some-windplayer-wp-variants>

(Rudy Verpaele created a great windsynth; these are some variants of my favorite instruments.)

Adapted windcontroller-presets for **Animoog**: https://www.animoog.org/wp-content/uploads/2021/11/Animoog_Windcontroller_Pack.zip

(Animoog is a monster of an iOS-synth; I adapted some presets, so they work with breath control. Good news: They also work with the update Animoog Z)

Adapted windcontroller-presets for **Surge**:

<https://www.dropbox.com/s/t0k3grhoh6gvx82/Surge%20Windcontroller%20Presets.zip?dl=0>

(I really wonder why I am the first to post windcontroller-presets for the free softsynth Surge; it is a really fine – and free – softsynth. I hope, that – one time – there will be a windcontroller-package by a really windsynth-sounddesigner. I only adapted existing presets to breath control)

Adapted windcontroller **Reaktor**-ensembles & Chet Singer legacy ensembles: <https://www.native-instruments.com/de/reaktor-community/reaktor-user-library/entry/show/14173/>

Reaktor from Native instruments has a lot to offer for windcontroller-player. You have to search for „Chet Singer“, there are lots of good instruments. I collected some of Chets early instruments and used his „breath gain control“ to make other ensembles (instruments & synths) „windcontroller-compatible“.

German windcontroller-ebook:

https://www.dropbox.com/s/v0mu6gfxd07kgsv/Windcontroller_EWI_Buch_V.1.1%20%2810-2020%29.pdf?dl=0

I think/hope, this ebook has a lot to offer for a windcontroller-player. It is best for windcontroller-beginner (to get an orientation in the complex „windcontroller-world“). If you want to dig in deeper, the ebook is best for windows-users and users of the DAW Reaper (because this is my system).

German windcontroller-ebook-update-chapter:

https://www.dropbox.com/s/wrh4hpwr28u7gvp/Windcontroller-Buch_NEUES.pdf?dl=0

Lots of things are changing within the windcontroller-world, so I decided to write an update of my ebook. Perhaps, I will write an update of the update from time to time...

Have fun!
