

The EQ-board is connected with 3 wires (white, red and black) to points a and b on the main PCB.  
 This is a standard Marshall tone stack, where the treble and mids pot are replaced by fix resistors.  
 If you use a 220k pot for R16/17 and a 25k pot for R18, you will have a standard TMB stack.  
 The Valve Jr. has R15 (1,5k) between a and b.

V1: ECC83  
 V2: EL84  
 D1-D4: 1N4007
